

soothers

INSTRUCTIONS FOR USE

For your child's safety WARNING!

Inspect carefully before each use. Pull the soother in all directions. Throw away at the first signs of damage or weakness. Only use dedicated soother holders tested to EN12586. Never attach other ribbons or cords to a soother, your child may be strangled by them. **Do not leave a soother in direct sunlight or near a source of heat, or leave in disinfectant ("sterilising solution") for longer than recommended, as this may weaken the teat.**

CLEANING AND STERILISATION:

Before first use place the soother in boiling water for 5 min, allow to cool, and squeeze out any trapped water from the soother. This is to ensure hygiene. Clean before each use. Wash in warm soapy water and rinse in clean water or use a dishwasher, top shelf only. Remove any water that may have entered the teat by squeezing the teat. Do not clean with solvents or harsh chemicals. Suitable for sterilisation by steam (electric and microwave), boiling or cold water tablet/liquid solution. **DO NOT sterilise the display case. It is not intended to be used for sterilisation or storage and should be disposed of correctly.**

STORAGE AND USE:

Do not store in direct sunlight or near a source of heat.

Do not store or allow to come into contact with solvents or harsh chemicals. Never dip teat in sweet substances or medication, your child may get tooth decay. **Replace the soother after one month, for safety and hygiene reasons.** In the event that the soother becomes lodged in the mouth, DO NOT PANIC; it cannot be swallowed and is designed to cope with such an event. Remove from the mouth with care, as gently as possible. When the soother is not in use for instance after sterilization, keep in a dry covered container.
